Supplemental Figure S6. TAT-BIND directly interacted with CAG repeat-containing RNA in a length-dependent manner. iTC studies of the binding affinity of TAT-BIND peptide (2 mM) to SCA2_{CAG22/42/55/72} RNA (4 μM) were performed. The top panel shows the raw thermogram and the bottom panel shows the binding isotherm fitted to a single-site model. Experiments were repeated three times and plotted as mean ± S.E.M.
