

RNA

A PUBLICATION OF THE RNA SOCIETY

VOL. 14, NO. 10

OCTOBER 2008

CONTENTS

Perspective

- Mechanistic insights from reversible splicing catalysis 1975
Duncan J. Smith and Maria M. Konarska

Bioinformatics

- ShapeFinder: A software system for high-throughput quantitative analysis of nucleic acid reactivity information resolved by capillary electrophoresis 1979
Suzy M. Vasa, Nicolas Guex, Kevin A. Wilkinson, Kevin M. Weeks, and Morgan C. Giddings

Report

- The C-terminal region of Ge-1 presents conserved structural features required for P-body localization 1991
Martin Jinek, Ana Eulalio, Andreas Lingel, Sigrun Helms, Elena Conti, and Elisa Izaurralde

Articles

- The sarcin–ricin loop of 23S rRNA is essential for assembly of the functional core of the 50S ribosomal subunit 1999
Laura Lancaster, Nicole J. Lambert, Eric J. Maklan, Lucas H. Horan, and Harry F. Noller
- Toward predicting self-splicing and protein-facilitated splicing of group I introns 2013^{OA}
Quentin Vicens, Paul J. Paukstelis, Eric Westhof, Alan M. Lambowitz, and Thomas R. Cech
- Novel noncoding antisense RNA transcribed from human *anti-NOS2A* locus is differentially regulated during neuronal differentiation of embryonic stem cells 2030^{OA}
Sergei A. Korneev, Elena I. Korneeva, Marya A. Lagarkova, Sergei L. Kiselev, Giles Critchley, and Michael O'Shea
- A cell-based screen for splicing regulators identifies hnRNP LL as a distinct signal-induced repressor of *CD45* variable exon 4 2038^{OA}
Justin D. Topp, Jason Jackson, Alexis A. Melton, and Kristen W. Lynch
- C. elegans* and *H. sapiens* mRNAs with edited 3' UTRs are present on polysomes 2050^{OA}
Heather A. Hundley, Ammie A. Krauchuk, and Brenda L. Bass
- TOR regulates the subcellular distribution of DIM2, a KH domain protein required for cotranscriptional ribosome assembly and pre-40S ribosome export 2061
Emmanuel Vanrobays, Alexis Leplus, Yvonne N. Osheim, Ann L. Beyer, Ludivine Wacheul, and Denis L.J. Lafontaine

Screening of human SNP database identifies recoding sites of A-to-I RNA editing <i>Willemijn M. Gommans, Nicholas E. Tatalias, Christina P. Sie, Dylan Dupuis, Nicholas Vendetti, Lauren Smith, Rikhi Kaushal, and Stefan Maas</i>	2074
Long-distance placement of substrate RNA by H/ACA proteins <i>Bo Liang, Elliot J. Kahen, Kate Calvin, Jing Zhou, Mario Blanco, and Hong Li</i>	2086 ^{OA}
tRNA cleavage is a conserved response to oxidative stress in eukaryotes <i>Debrah M. Thompson, Cheng Lu, Pamela J. Green, and Roy Parker</i>	2095 ^{OA}
Identification of specific <i>let-7</i> microRNA binding complexes in <i>Caenorhabditis elegans</i> <i>Shih-Peng Chan, Gopalakrishna Ramaswamy, Eun-Young Choi, and Frank J. Slack</i>	2104
Mir-302 reprograms human skin cancer cells into a pluripotent ES-cell-like state <i>Shi-Lung Lin, Donald C. Chang, Samantha Chang-Lin, Chun-Hung Lin, David T.S. Wu, David T. Chen, and Shao-Yao Ying</i>	2115
Effects of N^2, N^2 -dimethylguanosine on RNA structure and stability: Crystal structure of an RNA duplex with tandem $m^2G:A$ pairs <i>Pradeep S. Pallan, Christoph Kreutz, Silvia Bosio, Ronald Micura, and Martin Egli</i>	2125
Interactions between eIF4A1 and its accessory factors eIF4B and eIF4H <i>Nadja Rozovsky, Aimee C. Butterworth, and Melissa J. Moore</i>	2136
<i>lsm1</i> mutations impairing the ability of the Lsm1p-7p-Pat1p complex to preferentially bind to oligoadenylated RNA affect mRNA decay in vivo <i>Ashis Chowdhury and Sundaresan Tharun</i>	2149
Ribosomes bind leaderless mRNA in <i>Escherichia coli</i> through recognition of their 5'-terminal AUG <i>Jay E. Brock, Soheil Pourshahian, Jacqueline Giliberti, Patrick A. Limbach, and Gary R. Janssen</i>	2159
Activation of cap-independent translation by variant eukaryotic initiation factor 4G in vivo <i>Constanze Kaiser, Elena Y. Dobrikova, Shelton S. Bradrick, Mayya Shveygert, James T. Herbert, and Matthias Gromeier</i>	2170
A genome-wide screen identifies genes required for formation of the wobble nucleoside 5-methoxycarbonylmethyl-2-thiouridine in <i>Saccharomyces cerevisiae</i> <i>Bo Huang, Jian Lu, and Anders S. Byström</i>	2183
<i>Trypanosoma brucei</i> ATPase subunit 6 mRNA bound to gA6-14 forms a conserved three-helical structure <i>Larissa Reifur and Donna J. Koslowsky</i>	2195
Metal ion specificities for folding and cleavage activity in the <i>Schistosoma</i> hammerhead ribozyme <i>Jennifer L. Boots, Marella D. Canny, Ehsan Azimi, and Arthur Pardi</i>	2212
Identification of pseudouridine methyltransferase in <i>Escherichia coli</i> <i>Rya Ero, Lauri Peil, Aivar Liiv, and Jaanus Remme</i>	2223
YbeA is the $m^3\Psi$ methyltransferase RlmH that targets nucleotide 1915 in 23S rRNA <i>Elzbieta Purta, Katarzyna H. Kaminska, Joanna M. Kasprzak, Janusz M. Bujnicki, and Stephen Douthwaite</i>	2234

METHODS

- Pyrrolo-C as a molecular probe for monitoring conformations of the tRNA 3' end 2245
Chun-Mei Zhang, Cuiping Liu, Thomas Christian, Howard Gamper, Jef Rozenski, Dongli Pan, John B. Randolph, Eric Wickstrom, Barry S. Cooperman, and Ya-Ming Hou

- Site-specific crosslinking of human microRNPs to RNA targets 2254
Yohei Kirino and Zissimos Mourelatos

- RNA: Instructions for contributors** 2260

Announcement: Changes in Publication Charges and Open Access Charges for Members of the RNA Society

As most of our readers are aware, the *RNA* journal is the official publication of the RNA Society. The ongoing partnership between Cold Spring Harbor Laboratory Press and the Society has resulted in making *RNA* a respected and successful international forum for publishing original reports on RNA research in the broadest sense. We are pleased to announce that this success has enabled the Society to substantially reduce the costs associated with publishing in *RNA* for members.

Beginning with papers published in 2008, members of the RNA Society will receive a 50% discount on page charges (\$25 instead of \$50) as well as a 50% discount on the first color figure (\$225 instead of \$450). For those members who wish to have their work immediately accessible to the entire community (Open Access), the charge will be \$1500 (a \$500 savings from the non-member fee). We note that these member savings more than offset the cost of a one-year membership in the Society, which includes a subscription to *RNA* (\$160 for print and online, \$140 for online only). In addition to the benefits in publication costs, members also receive:

- Reduced registration fees for the annual meeting of the Society (more than \$100 saving)
- The RNA Society Newsletter, a forum for disseminating information to members and discussing issues affecting the Society and RNA Science
- Numerous opportunities for students and post-docs to become involved in the Society
- The Directory of Members, available on the Web and in print
- Free job postings on the Society Employment and Careers Web site
- Opportunities to request Travel Fellowship and Meeting Support for RNA-related meetings you are organizing.

If you wish to take advantage of these benefits or are considering publishing in *RNA*, take a moment to start or renew your membership for 2008 (<http://rnasociety.org/membership>). The RNA Society is an interdisciplinary, cohesive intellectual home for those interested in all aspects of RNA Science. We welcome new members from all areas of scientific research and we look forward to sharing the new perspectives they bring to the Society.

In addition to reducing publication costs for members of the RNA Society, beginning in 2008 *RNA* will start to accept Supplementary Material which will be linked to the article published online. Such Supplementary Material will be restricted to long tables of data, lists of genomic and sequence data, or videos. Submitted Supplementary Material such as gels or other simple figures as well as standard tables will not be linked to online articles and must be maintained on the author's Web site. In this regard, Supplementary Material is not intended for completing a manuscript with standard figures or tables. Appropriate Supplementary Material, as discussed above, will be peer-reviewed and must be submitted online at the same time as the manuscript. It cannot be altered after acceptance of the manuscript. Submission of Supplementary Material to the journal is not an alternative to submission to public databases (thus crystal structure coordinates, sequence data, microarray data must be submitted prior to submission to the journal and accession numbers given in the manuscript). Public databases have confidential sections to which passwords give access for editors and referees on request. The context of the files contained in the Supplementary Material should be precisely described at the end of the Material and Methods section in the manuscript and referred to at the appropriate places in the text. The types of files supplied should be clearly indicated (.doc, .xls, .rtf, .mp3, .mpeg, .mov, .wav, ...).

In sum, we believe the changes outlined above will facilitate continued growth of the journal and we thank all authors and reviewers for making *RNA* what it is today.

Evelyn Jabri, CEO, RNA Society
Timothy W. Nilsen, Editor in Chief
