CONTENTS

2023 Recipients of the RNA Journal Prize

v

Bioinformatics

AptaDB: a comprehensive database integrating aptamer–target interactions

189

Long Chen, Zhuohang Yu, Zengrui Wu, Moran Zhou, Yimeng Wang, Xinxin Yu, Weihua Li, Guixia Liu, and Yun Tang

Reports

RlmQ: a newly discovered rRNA modification enzyme bridging RNA modification and virulence traits in *Staphylococcus aureus*

200^{OA}

Roberto Bahena-Ceron, Chloé Teixeira, Jose R. Jaramillo Ponce, Philippe Wolff, Florence Couzon, Pauline François, Bruno P. Klaholz, François Vandenesch, Pascale Romby, Karen Moreau, and Stefano Marzi

Diversity and modularity of tyrosine-accepting tRNA-like structures

213

Madeline E. Sherlock, Conner J. Langeberg, and Jeffrey S. Kieft

Articles

LARP4 is an RNA-binding protein that binds nuclear-encoded mitochondrial mRNAs to promote mitochondrial function

223^{OA}

Benjamin M. Lewis, Chae Yun Cho, Hsuan-Lin Her, Orel Mizrahi, Tony Hunter, and Gene W. Yeo

Dissection of protein and RNA regions required for SPEN binding to XIST A-repeat RNA

240^{OA}

Aileen C. Button, Simone D. Hall, Ethan L. Ashley, and Colleen A. McHugh

Genome-wide kinetic profiling of pre-mRNA 3' end cleavage

256^{OA}

Leslie Torres-Ulloa, Ezequiel Calvo-Roitberg, and Athma A. Pai

(continued)

Cover Illustration: Human spliceosomal complex (PDB id: 8C6J; Dybkov O, Preussner M, El Ayoubi L, Feng VY, Harnisch C, Merz K, Leupold P, Yudichev P, Agafonov DE, Will CL, et al. 2023. Regulation of 3' splice site selection after step 1 of splicing by spliceosomal C* proteins. *Sci Adv* **9**: eadf178). Human C* spliceosomes catalyze step 2 of splicing and regulate alternative splicing. Cryo-electron microscopy reveals the location of proteins recruited to participate in formation of C* spliceosomes, and elucidates the path of the intron 3' region. RNA (U2, U5, U6, exon and intron chains) are displayed using NDB colors: A—red, C—yellow, G—green, U—cyan. Globular and α -helical protein subunits are shown as semitransparent surfaces. Cover image provided by the Nucleic Acid Knowledgebase (nakb.org). Image generated using ChimeraX (*Protein Sci* **30**: 70–82).

Examining the capacity of human U1 snRNA variants to facilitate pre-mRNA splicing 271^{OA}
Jason Wong, Ryan Yellamaty, Christina Gallante, Ethan Lawrence, William Martelly, and Shalini Sharma

CPSF3 inhibition blocks pancreatic cancer cell proliferation through disruption of core histone mRNA processing 281^{OA}
Abdulrahman A. Alahmari, Aditi H. Chaubey, Venkata S. Jonnakuti, Arwen A. Tisdale, Carla D. Schwarz, Abigail C. Cornwell, Kathryn E. Maraszek, Emily J. Paterson, Minsuh Kim, Swati Venkat, Eduardo Cortes Gomez, Jianmin Wang, Katerina V. Gurova, Hari Krishna Yalamanchili, and Michael E. Feigin

Methods

An easy tool to monitor the elemental steps of in vitro translation via gel electrophoresis of fluorescently labeled small peptides 298
Valeriya I. Marina, Medina Bidzhieva, Andrey G. Tereshchenkov, Dmitry Orekhov, Vladislava E. Sagitova, Nataliya V. Sumbatyan, Vadim N. Tashlitsky, Artem S. Ferberg, Tinashe P. Maviza, Pavel Kasatsky, Olga Tolicheva, Alena Paleskava, Vladimir I. Polshakov, Ilya A. Osterman, Olga A. Dontsova, Andrey L. Konevega, and Petr V. Sergiev

SCARPET: site-specific quantification of methylated and nonmethylated adenosines reveals m⁶A stoichiometry 308
Aashiq H. Mirza, Yaron Bram, Robert E. Schwartz, and Samie R. Jaffrey
