

RNA

A PUBLICATION OF THE RNA SOCIETY

VOL. 31, NO. 3

MARCH 2025

CONTENTS

Introduction

- The unfolding landscape of RNA and disease 273^{OA}
Maria Carmo-Fonseca and Juan Valcárcel

Perspectives

- RNA-binding proteins in disease etiology: fragile X syndrome and spinal muscular atrophy 277^{OA}
Gideon Dreyfuss
- Connecting genotype and phenotype in minor spliceosome diseases 284^{OA}
Antto J. Norppa, Mariia V. Shcherbii, and Mikko J. Frilander
- Alternative splicing factors and cardiac disease: more than just missplicing? 300^{OA}
Zachery R. Gregorich and Wei Guo
- Trinucleotide repeat expansion and RNA dysregulation in fragile X syndrome: emerging therapeutic approaches 307^{OA}
Suna Jung and Joel D. Richter
- SF3B1: from core splicing factor to oncogenic driver 314^{OA}
Pedro Bak-Gordon and James L. Manley
- Exploring the therapeutic potential of modulating nonsense-mediated mRNA decay 333^{OA}
Mary McMahon and Lynne E. Maquat
- RNA gain-of-function mechanisms in short tandem repeat diseases 349^{OA}
Mackenzie L. Davenport and Maurice S. Swanson
- RNA editing in disease: mechanisms and therapeutic potential 359^{OA}
Kasra Honarmand Tamizkar and Michael F. Jantsch
- RNA sensing at the crossroads of autoimmunity and autoinflammation 369^{OA}
Sandra G. Williams, Soyeong Sim, and Sandra L. Wolin

(continued)

Cover Illustration: Pictorial representation of a viral quasispecies as the background of a complex virosphere embedded in a diverse cellular world. (Original image composed by Esteban Domingo, Brenda Martínez-González, Pilar Somovilla, Carlos García-Crespo, María Eugenia Soria, Ana Isabel de Ávila, Ignacio Gadea, and Celia Perales, with the collaboration of Dr. Soledad Delgado.)

Mitochondrial tRNA modifications: functions, diseases caused by their loss, and treatment strategies <i>Takeshi Chujo and Kazuhito Tomizawa</i>	382 ^{OA}
N ⁶ -methyladenosine reader YTHDF2 in cell state transition and antitumor immunity <i>Liangliang Wang, Ralph R. Weichselbaum, and Chuan He</i>	395 ^{OA}
Cytoplasmic regulation of the poly(A) tail length as a potential therapeutic target <i>Mercedes Fernandez and Raul Mendez</i>	402 ^{OA}
eIF4F-mediated dysregulation of mRNA translation in cancer <i>Mehdi Amiri, Niaz Mahmood, Soroush Tahmasebi, and Nahum Sonenberg</i>	416 ^{OA}
A general and biomedical perspective of viral quasispecies <i>Esteban Domingo, Brenda Martínez-González, Pilar Somovilla, Carlos García-Crespo, María Eugenia Soria, Ana Isabel de Ávila, Ignacio Gadea, and Celia Perales</i>	429 ^{OA}
Nuclear RNA-binding proteins meet cytoplasmic viruses <i>Alfredo Castello and Wael Kamel</i>	444 ^{OA}
RNA: Instructions for contributors	452
