Made for each other!

Streamline, simplify, and scale-up
with SLAMseq and QuantSeq

Lexogen's perfect couple for high-throughput kinetic RNA sequencing

When **SLAMseq**, the most commonly used RNA labeling technology, and **QuantSeq**, the method of choice for gene expression profiling, unite, **your benefits are multiplied!** Combined, they are the preferred approach for high-throughput kinetic RNA sequencing and used to study effects of fast-acting treatments on RNA kinetics. Academic and non-academic scientists are equally profiting from this duo and utilize it to simplify and streamline their workflows.

Cost-efficient analysis of RNA kinetics

SLAMseq-mediated nucleotide conversions are most cost-efficiently detected by QuantSeq due to the 3'mRNA-Seq approach.

Follow the recommendation

Lexogen's QuantSeq is the Nr. 1 library prep kit recommended to use with SLAMseq by researchers world-wide.

Simplified ordering experience based on your needs

Application-based ordering packages ease your life and give you more time for your research.

Optimized data analysis pipeline with SLAMdunk

SLAMdunk is optimized for QuantSeq libraries and makes complex SLAMseq base calling easy.
