

RNA

A PUBLICATION OF THE RNA SOCIETY

VOL. 32, NO. 4

APRIL 2026

CONTENTS

Introduction

- System-level measurement, modeling, and manipulation of RNA 409^{OA}
Mihaela Zavolan and Gene W. Yeo

Perspectives

- Probing the epitranscriptome and RNA damage with nanopore direct RNA sequencing 412^{OA}
Aaron M. Fleming and Cynthia J. Burrows
- Deep learning for RNA secondary structure determination: gauging generalizability and broadening the scope of traditional methods 428^{OA}
Marcell Szikszai, Ting-Yuan Wang, Ryan Krueger, David H. Mathews, Max Ward, and Sharon Aviran
- Machine learning for RNA secondary structure prediction: a review of current methods and challenges 443^{OA}
Giuseppe Sacco, Giovanni Bussi, and Guido Sanguinetti
- Progress and challenges in profiling protein–RNA and protein-associated RNA–RNA interactions 457^{OA}
Zhuoyi Song and Eric L. Van Nostrand
- miRNA regulation in brain tissue space: the 3'UTR perspective 472^{OA}
Denise Aigner, Florian Bartsch, Poojashree Bhaskar, Lisa Emmenegger, Nikos Karaikos, Nikolaus Rajewsky, and Agnieszka Rybak-Wolf
- Modulating the cleavage and polyadenylation site: from research tools to therapeutic opportunities 489^{OA}
Fengyi Ma and Bin Tian
- Representation learning of single-cell RNA-seq data 504^{OA}
Constantin Ahlmann-Eltze, Florian Barkmann, Jan Lause, Valentina Boeva, and Dmitry Kobak

(continued)

Cover Illustration: AI-enabled representation depicting a hypothetical structured RNA that is subjected to primary sequence and secondary structure analysis by computational methods such as neural networks and other machine learning approaches.

Contents (*continued*)

Bridging single-molecule and genome-wide studies of cellular mRNA translation	520 ^{OA}
<i>Adam Koch, Kotaro Tomuro, Taisei Wakigawa, Tatsuya Morisaki, Shintaro Iwasaki, and Timothy J. Stasevich</i>	

RNA: Instructions for contributors	538
