

Supplementary Figures and Legends

A. 293T cells

B. IFN Receptor Neg MEFs

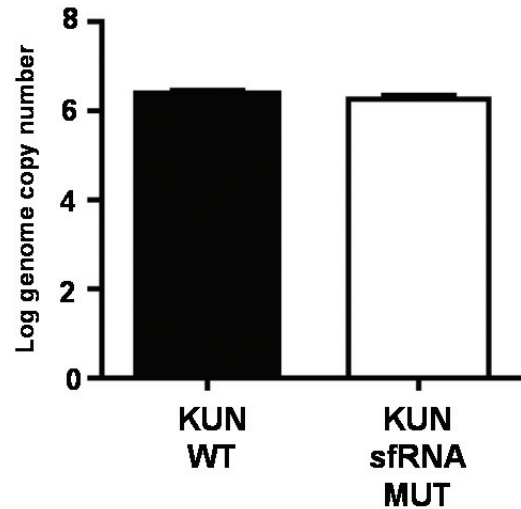

Figure S1 (related to Figs 3, 5 and 7): Wild type Kunjin virus and a Kunjin virus variant that is defective in sfRNA formation replicate to similar levels in 293 T cells (Panel A) and interferon α/β -receptor negative mouse embryo fibroblasts (Panel B). Total RNA was isolated at 48 hours post-infection and assayed for Kunjin viral genomic RNA by qRT-PCR.

Figure S2 (related to Fig. 7): Microarray data used to derive the heat map shown in Fig. 7.

See appended Excel file.
