

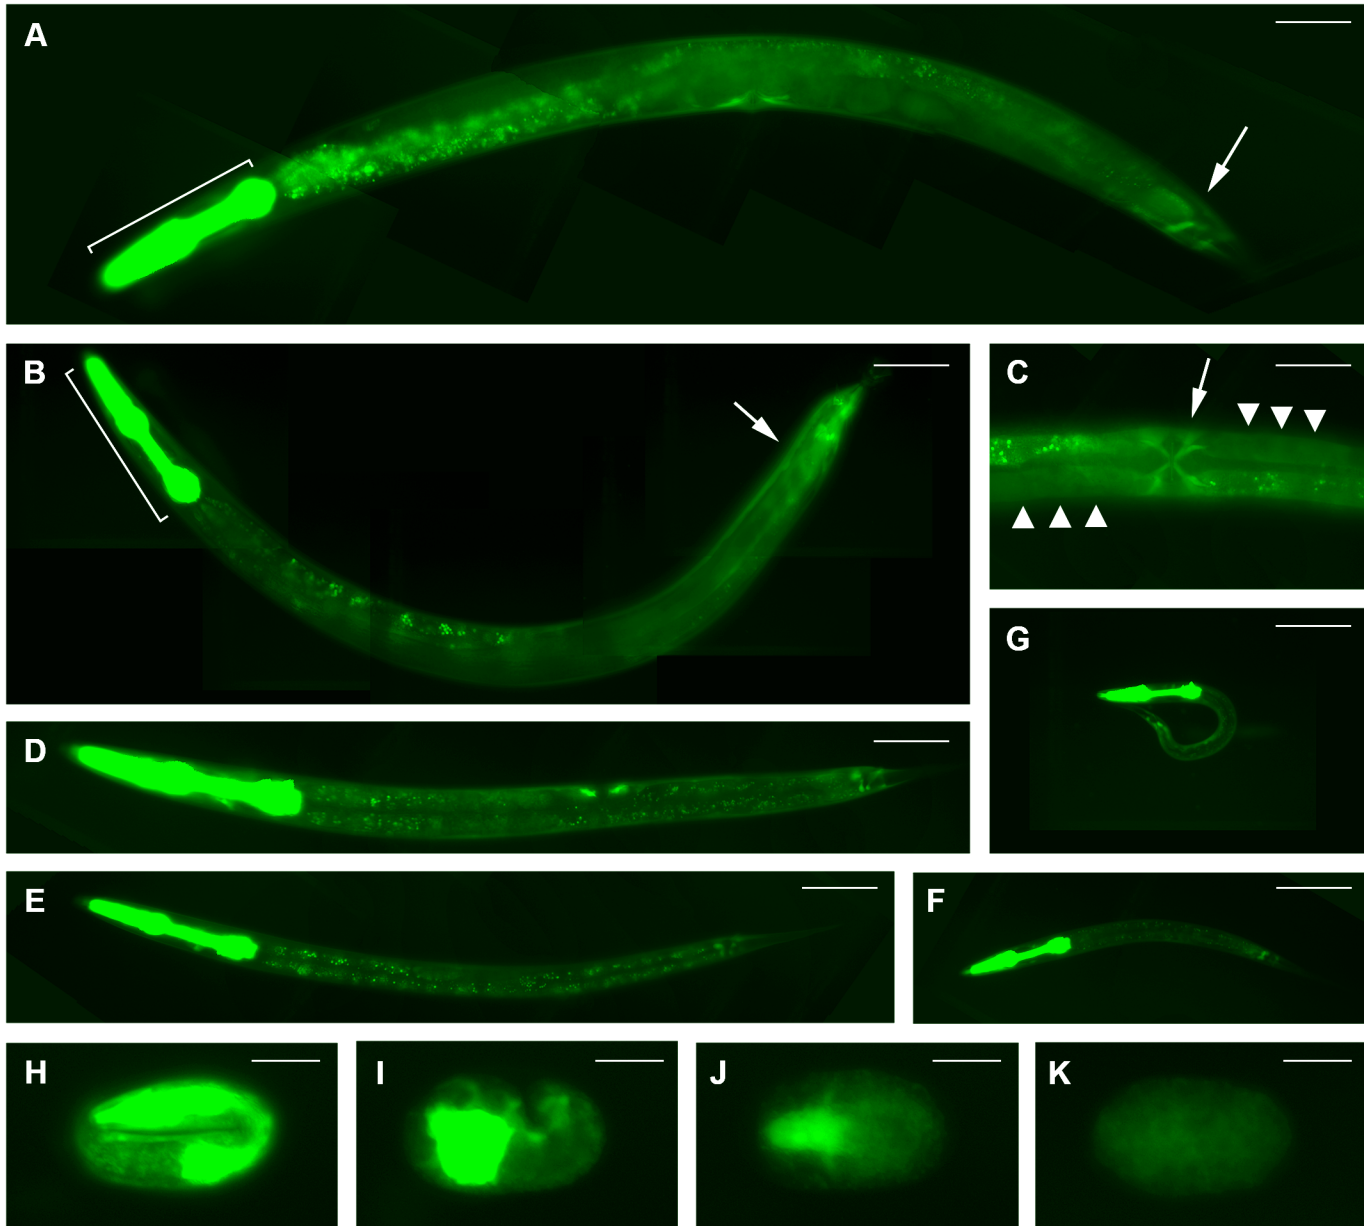

FIGURE S1. Expression analysis of the *gfp* reporter driven by the *mir-1* promoter. Fluorescent images show an adult hermaphrodite (A), an adult male (B), and a ventral view of the vulva of an adult hermaphrodite (C). The white brackets designate the pharynx (A,B). The white arrows indicate the anal depressor muscle (A), the diagonal muscle (B), and the vulval muscle (C). The white arrowheads show the body-wall muscle (C). Larvae are at the L4 (D), L3 (E), L2 (F), and L1 (G) stages. Embryos are at the 4-fold (H), 1.5-fold (I), 500-cell (J), and 200-cell (K) stages. Scale bars, 100 μ m (A-G) and 30 μ m (H-K).
