

Supplemental Figure S8. ADARs and RNAi factors are not required for the association between dsRNAs and highly expressed genes. The Tukey box-plot shows embryo-stage expression of all genes (All) or EER-associated genes (EAG) on autosome arms in six genotypes: wildtype (WT), *adr-1;adr-2*, *rrf-3*, *adr-1;adr-2;rrf-3*, *adr-1;adr-2;rrf-3;rde-1*, and *adr-1;adr-2;rrf-3;rde-4*. See (Reich et al. 2018) for details on each genotype and RNAseq datasets. ****, $P < 0.0001$; Mann-Whitney test.
