

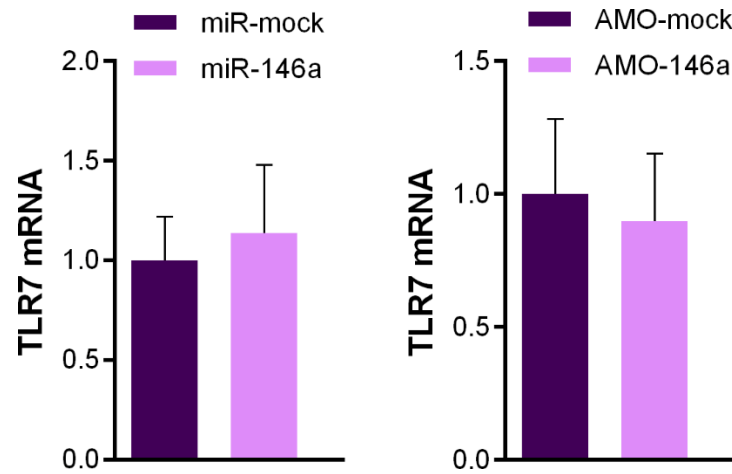

Figure S1. TLR7 mRNA expression in the cells with miR-146a or AMO-146a. HeLa cells were transfected with miR-146a mimics or AMO-146a, and infected with CVB3 (MOI = 1) 24 h post-transfection. TLR7 mRNA abundance was quantified by RT-qPCR with $\Delta\Delta C_T$ method. The mRNA abundance of TLR7 was normalized by GAPDH mRNA. Error bars represent SD, $n = 4$.
