

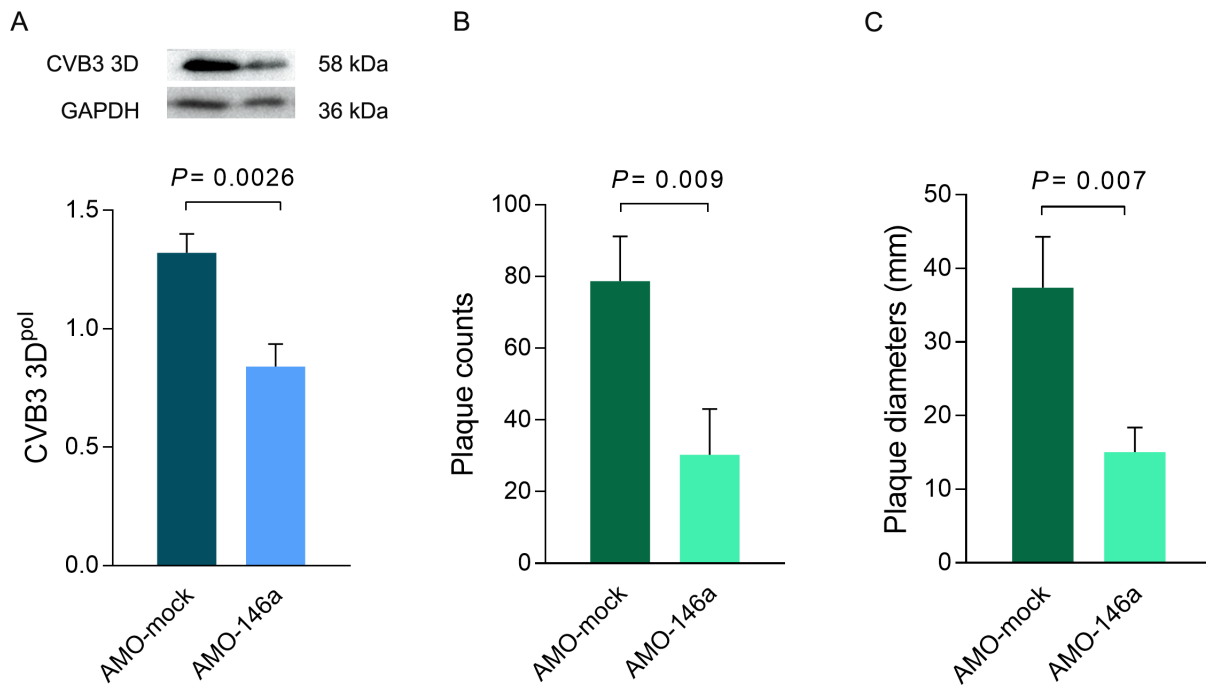

Figure S3. MiR-146a may affect CVB3 replication. HeLa cells were transfected with AMO-146a and scramble RNA, respectively. The cells were infected with CVB3 24 h post-transfection. (A) The 3D protein was detected by Western blotting 24 h p.i.. (B, C) The cells were covered with 0.8% agarose gel 1 h p.i., and the plaques were measured 24 h p.i.. Error bars represent SD, $n = 4$.
