

A**B**

Figure S3. RPS12 overexpression does not augment p53 levels. (A) Western blots for p53 levels using β -Actin as loading control from normoxic (21% O₂) and hypoxic (1% O₂) HEK293 cells overexpressing RPS12 (Myc-DDK-RPS12) or empty vector control (pMyc-N1). (B) Quantification of western blots from (A), normalizing band intensity of p53 to β -Actin and making relative to empty vector control. Data (n = 3), mean \pm s.e.m. Two tailed unpaired t-test was performed.
