Supplemental Figure 1. *In vitro* transcription and translation assay. The full-length mouse and human lncRNA cDNA was cloned into pcmsport 6.1 vector, which contains a T7 or a SP6 promoter. The Transend non-radioactive system was used to incorporate biotinylated lysine into nascent proteins. **A.** ORF prediction of Ppp1r1b-lncRNA in mouse and human orthologues. **B.** *in vitro* transcription-translation assay results. Right brace indicate the region of peptide bands on the western blot if they are expressed.

Supplemental Figure 2. *In vitro and in vivo* Expression of Ppp1r1b-lncRNA in our used systems. RT-PCR was performed with isolated RNA from different systems. **A.** Human PPP1R1B-lncRNA expression. Human skeletal myoblasts (HSM) before and after myotube differentiation as well as human iPSC-derived cardiomyocytes were used. **B.** Mouse Ppp1r1b-lncRNA expression. Mouse skeletal myoblasts (C2C12) before and after myotube differentiation as well as mouse neonatal heart tissue were used.
