

Supplementary Figure 8. Influence of *MBNL2* knockdown on cell viability. (A) Cell viability of normoxic A549 and MCF-7 cells transfected with a nonsilencing control siRNA. Cells were treated with the indicated concentrations of cisplatin for 24 h. n = 3. (B) Cell viability of normoxic or hypoxic A549 and MCF-7 cells transfected with an siRNA targeting *MBNL2*. Cells were treated with the indicated concentrations of cisplatin for 24 h. n = 3. (**) *P* value < 0.01, (*) *P* value < 0.05.
