

Supplemental_Figure_S3.

The 5'L conformers showed distinct NCp15 interaction properties.

Varying amounts of NCp15 were incubated with 5'L_P (A) and 5'L_T (B) on biosensors, and the association and dissociation processes were monitored continuously by biolayer interferometry. (C) The responses at the end of association (i.e. 175-180 s) were plotted versus NCp15 concentrations. Data are means of at least three independent experiments. Error bars represent standard deviations. * Student's t-test, $P < 0.05$.
