

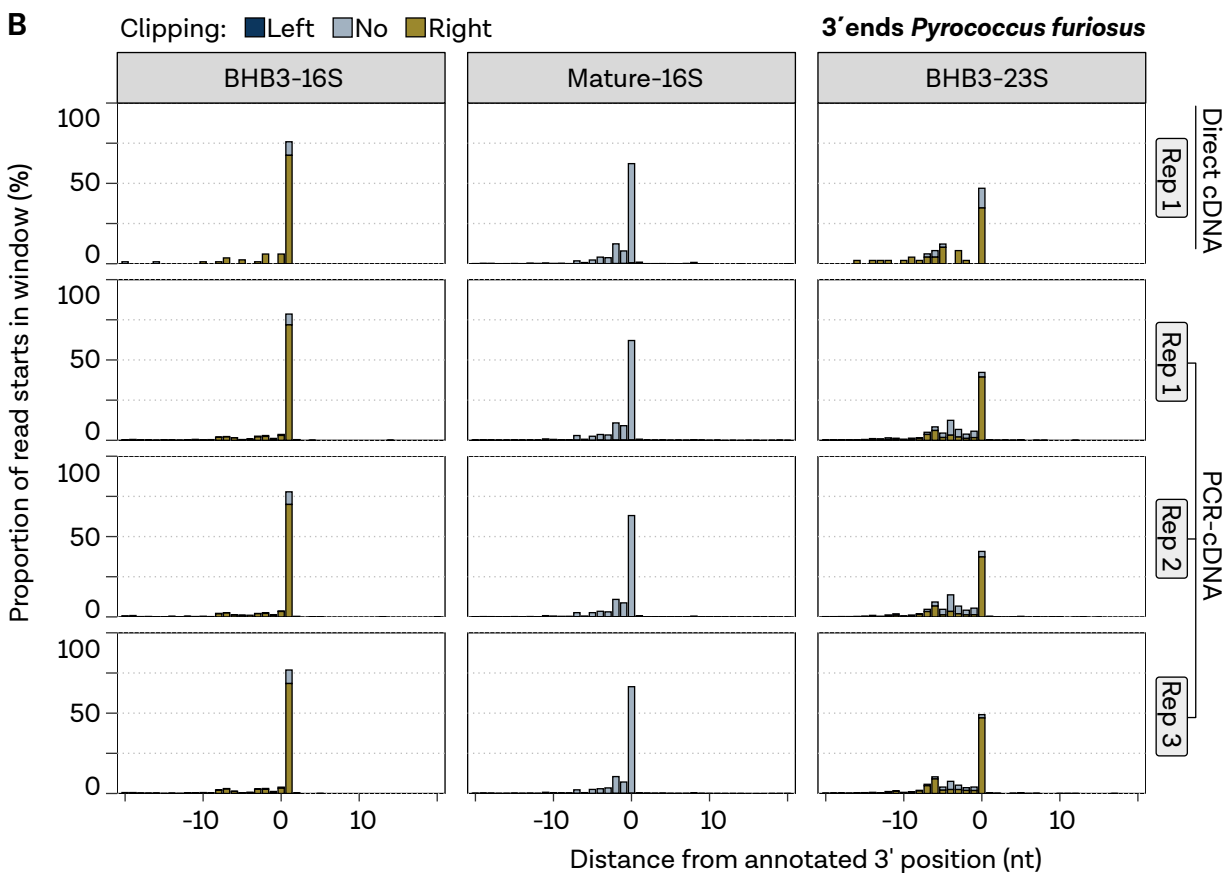

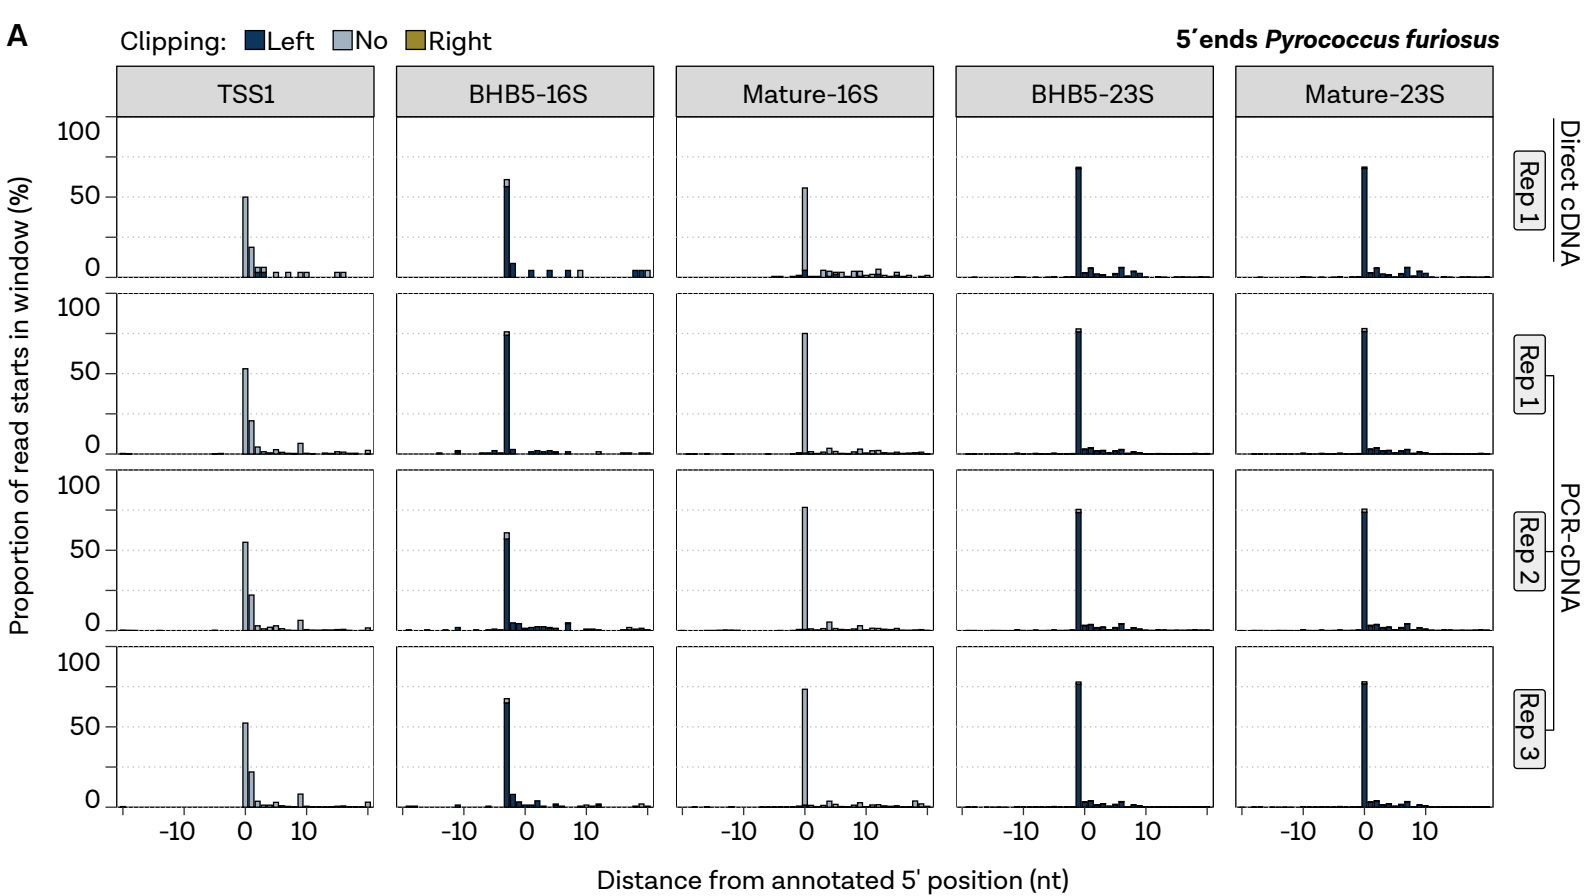

Fig. S12 | Accuracy of 5' and 3' end detection in *P. furiosus*.

A, Relative number of detected 5' and **D**, 3' ends with respect to the expected positions calculated from the occurrence in a 41 bp window (-20 to 20 from annotated position). Negative distance indicates upstream-mapping of 5' or 3' ends. Bars are coloured according to the soft-clipping profile in light blue (≤ 20 nt), dark blue (> 20 nt, left) and olive (> 20 nt, right). The following positions (reference sequence: NZ_CP023154.1) were used for the analysis: 120444 (TSS1), 120624 (BHB5-16S), 120687 (Mature-16S start), 122423 (BHB5-23S), 122422 (Mature-23S start), 122213 (BHB3-16S), 122183 (Mature-16S end), 125517 (BHB3-23S).
