

SUPPLEMENTAL FIGURE 2 LEGEND

Figure 2: Separate, greyscale fluorescence scans of the gel shown in Figure 4. (A) Native PAGE showing the dye-labeled ssDNA1 and dye-labeled ssDNA2 samples loaded separately and as mixtures, alongside unlabeled controls. This gel was imaged for AZ488 fluorescence, before EtBr staining. (B) The same gel as in panel A, imaged for AZ680 fluorescence, before EtBr staining.

Supplemental Figure 2:
