

SUPPLEMENTAL FIGURE 3 LEGEND

Figure 3: (A) 3 kbp circular plasmid labeled at 10 mM DAAS followed by AZ488-DBCO dye labeling, run alongside unlabeled and 0 mM DAAS controls on a native agarose gel. This gel was stained with EtBr. (B) The same gel as in panel A, before EtBr staining, imaged for AZ488 fluorescence via a SYBR green filter.

Supplemental Figure 3:
