

Supplemental Figure S2. Effects on LCD conformation remain consistent with lower concentrations of DNAJA2, Hero11, or Hero11KR→G

(A – C) FRET efficiency histograms of the TDP-43 LCD WT incubated in 0.075 mg/mL Hero11KR→G (A), DNAJA2 (B), or Hero11 (C), compared against 0.3 mg/mL. BSA was supplemented for the same total protein concentration of 0.3 mg/mL to accommodate comparison between the different concentrations. Each histogram contains all observations for a single experiment and the total number of molecules in each histogram are (A), 68; (B), 101; (C) 96. Histograms from Fig. 3G, I and K, corresponding to 0.3 mg/mL of the respective protein are replotted here for comparison.
