

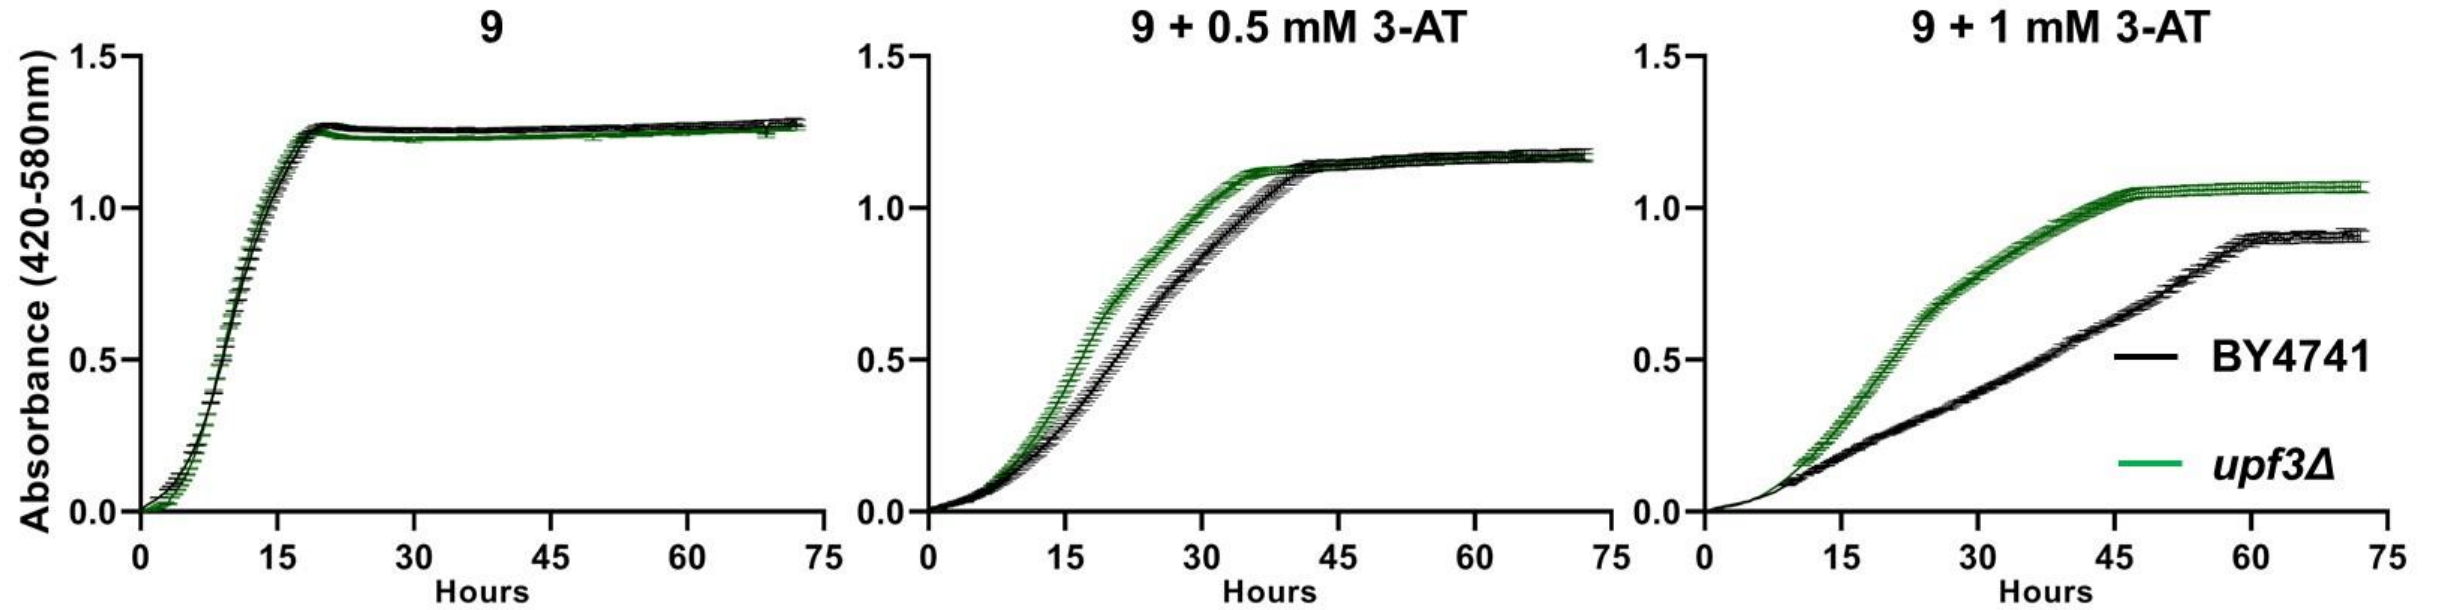

Figure S4

Enhancement of NMD phenotype in construct NMDv9 using 3-AT

BY4741 and isogenic *upf3Δ* carrying NMDv9 were grown in histidine and uracil dropout media. Growth measurements are presented as mean $\pm$ standard error of the mean for each time point. Optical density values were produced by Bioscreen for each strain in triplicates. The amount of 3-AT added is indicated in the title of each graph.
