

S1 Fig. Differentially expressed genes in wild-type plants upon light exposure. Differentially expressed genes (DEGs) obtained by pairwise comparison. Two filtering criteria were applied: (Threshold 1) adjusted P-value ≤ 0.05 only, and (Threshold 2) adjusted P-value ≤ 0.05 with 2-fold change. Up-regulated and down-regulated DEGs are represented in orange and blue, respectively. Full lists of DEGs annotations, Log2FC and adjusted P-values for T0/3h and T0/24h comparisons are available in S6 and S7 Data, respectively.
