

Supplemental Figure S5. KM Plotter (<https://kmplot.com/>) output. (A) Graphs from **KM Plotter** for liver cancer show time in months (x-axis) plotted against the survival probability (y-axis) for non-reproducible cases. Legends at the top and bottom show Hazard ratio (HR) for relative risks (death, relapse) and logrank p-values and indicate the color code for high (red) and low (black) expression, respectively. Risk numbers are indicated for high/low expression at each time point at the bottom. (B) Graphs from KM Plotter show time in months (x-axis) plotted against the survival probability (y-axis) for reproducible cases like in panel A.
